

MANUFACTURER

No-Burn, Inc. 1255 High Street, Suite 200 Wadsworth, Ohio 44281 www.noburn.com

DESCRIPTION

No-Burn[®] ThB *Spray Seal*TM is an intumescent coating for use over open and closed cell spray polyurethane foam as a Class II vapor retarder, thermal barrier, and ignition barrier in one application. Durability features also include exposure to UV and weather for up to 6 months. Compliant with the International Building Code and International Residential Code, ThB *Spray Seal*TM approvals are listed in Technical Evaluation Report TER 1905-03.

1. PRIMARY USES

For use in new and existing buildings, complying with the IBC[®], IMC[®], IRC[®], IEBC[®] and other applicable codes or standards, ThB *Spray SealTM* is utilized in applications where it provides:

- Interior Finish Classification Class I or Class A: FS 0 / SD 10
- Alternative or Non-prescriptive Thermal Barrier
- Alternative or Non-prescriptive Ignition Barrier
- Class II Vapor Retardancy

Code Compliance Evaluation Reports: <u>TER 1905-03</u>. Installation Verification: <u>SPFA-148</u>.

2. SPECIFICATIONS

Color:	Opaque/White/Tinted
Finish:	Flat
VOC Content:	18 g/L EPA Method 24
Dry Time:	60-90 Minutes
Pails:	5 Gallons (19 L), 58.5 lbs.
Drums:	55 Gallon Drum (208 L), net 45 Gallons
	(170 L) 586.5 lbs.
Shelf Life:	12 Months
Cure Time:	24 Hours
Boiling Point:	212°F
Freezing Point:	32°F
% Volatile by Volume:	33%
Specific Gravity:	1.25

View product <u>Safety Data Sheet (M)SDS</u> and <u>Best Practices for Safe</u> <u>Handling & Storage</u> for more information.

3. PRODUCT PERFORMANCE

No-Burn[®] ThB *Spray Seal*[™] may be used for the *Primary Uses* expressed. As a Class II Vapor Retarder, and as a component in an alternative ignition barrier assembly or thermal barrier assembly, ThB *Spray Seal*[™] is a vapor retarder and intumescent fire protective coating for interior spaces where spray polyurethane foam is installed. Complies with USDA requirements for incidental food contact and ANSI/NSF 51 Food Zone Materials.

4. APPLICABLE STANDARDS

No-Burn[®] ThB *Spray Seal*[™] may be specified in compliance of the following: AC377 EC017

EC01	17
GSA	PBS-P100

AC456

Made in the USA

5. EQUIPMENT

Methods of application include airless sprayer, roller or brush. Manufacturers and models of airless spray *Equipment* vary and examples of applicable *Equipment* follow. Airless spray *Equipment* recommendations have been linked for reference to manufacturer specifications.

Table 2				
Equipment				
Manufacturer	Manufacturer Model			
Graco®	<u>Ultra Max II 795</u>	<u>Ultra Max II 1595</u>		
Graco-	<u>Ultra Max II 1095</u>	TexSpray Mark V		
Titan [®] Impact [™] 840 PowrTwin [™] 6900 Plus				
Impact [™] 1140 PowrTwin [™] 8900 Plus				
Recommended tip orifice sizes of .023029 and airless sprayer hoses inside				
diameter of $3/8''$ for up to 50' and $\frac{1}{2}''$ for hose runs longer than 50'. A working				
section of ¼" can be used for the 10-15' right before the spray gun.				

Airless paint sprayer must be capable of producing a minimum of 3,300 psi. Recommended tip sizes are .023-.029 and will vary depending on installer experience while maintaining desired wet film thickness. Variations in spray pattern width may be required depending on the

surface area and the Substrate(s) to which ThB *Spray Seal*TM is being applied, as well as installer experience, while maintaining minimum required wet film thickness. Removal of filter from the spray gun and pressure side of the sprayer to allow for the passage of solid content is required. Do not remove the rock guard (screen) from the bottom of the

intake tube. Airless sprayer hoses are recommended to have a minimum inside diameter of 3/8" for up to 50' and $\frac{1}{2}$ " for hose runs longer than 50', however a working section of $\frac{1}{2}$ " can be used for the 10-15' right before the spray gun. Water can be used to flush the system after installation but should not be left in the system. After flushing, a corrosion resistant, lubricating fluid recommended by the manufacturer should be run through the system prior to storage.

6. PERSONAL PROTECTION & EXPOSURE CONTROLS

Wearing a certified respirator and goggles to avoid overspray and splashing are recommended. Eye and face protection should be in accordance with OSHA 29 CFR 1910.133. Rubber or plastic gloves are recommended for hand and arm protection. Personal cleanup may be with soap and water. If sprayed, wear an air-purifying respirator approved by NIOSH in accordance with OSHA 29 CFR 1910.134(d)(1)(ii). If used in a confined area, a full-face, powered air-purifying respirator (PAPR) or supplied-air respirator (SAR) is recommended. Use respirators in accordance with 29 CFR 1910.134(d)(3)(i)(A) Table 1, 29 CFR 1910.134(d)(3)(ii)(B) and 29 CFR 1910.134(d)(3)(iv)(B).

Use appropriate engineering controls, such as proper ventilation. Where such systems are not effective, wear suitable personal protective equipment, which performs satisfactorily and meets OSHA or other recognized standards.

7. MIXING, TINTING, & OVERCOATS

ThB *Spray Seal*TM must be thoroughly mixed before use in accordance with the manufacturer's recommendations. Mix with a 5 gallon paddle style wand at or between 800-1200 RPM until thoroughly mixed. Shaking No-Burn[®] ThB *Spray Seal*TM with a paint shaker is NOT sufficient. Filtering or straining ThB *Spray Seal*TM is not recommended. If No-Burn[®] ThB *Spray Seal*TM is mixed more than 24 hours prior to use, mix it again according to manufacturer's instructions.

Thinning is usually not needed; if ThB *Spray Seal*TM has been exposed to high heat, water may evaporate from the plastic 5 gallon container. If the paint level is below 3-4 inches from the top of the container, add enough water to bring the level back up to within 3 inches from the top in order to ensure proper consistency. Mix ThB *Spray Seal*TM again according to manufacturer's instructions.

After mixing, if the viscosity is still too high, you may add 8 ounces of water per 5 gallon pail and mix to reduce the viscosity. Mix ThB *Spray Seal*TM again according to manufacturer's instructions. Use Caution not to add too much water or the product may run and drip during application.

ThB Spray SealTM should never be allowed to freeze $32^{\circ}F$ (0°C), stored between $40^{\circ}F$ and $90^{\circ}F$ (4.4°C and $32.2^{\circ}C$), and kept out of direct sunlight; if you cannot verify that these conditions have been maintained, the product may be disposed of in accordance with the manufacturer's (M)SDS.

ThB Spray SealTM Intumescent Coating Spray Polyurethane Foam Insulation

If tinting is desired, ThB *Spray Seal*TM may be tinted at a maximum rate of 2 oz. of tint per gallon with commercially available tint that is safe to be used with water-based paints. It is recommended that No-Burn[®] Black Tint, manufactured by No-Burn, Inc., be used for tinting. No-Burn[®]

Black Tint can be added at a rate of 12 oz. per 5-gallon pail. Contact the manufacturer for additional tinting information.

When a specified or black color is desired, an overcoat may be used and shall be water-based with a pH of 7-8 (i.e., Sherwin Williams A-100 or Behr Premium Plus). Prior to the use of any overcoat, it is recommended that an inconspicuous area be tested for compatibility before widespread application. Compatibility may be noted as the overall satisfactory condition of the Substrate(s) once No-Burn® ThB *Spray Seal*TM and an overcoat have been applied. No-Burn® Inc. makes no guarantees of color matching when using a tint from a third-party manufacturer.

8. APPLICATION

When applying No-Burn[®] ThB *Spray Seal*TM, the coating shall be applied to *Substrate(s)*, as applicable, in accordance with Evaluation Report (TER) 1905-03 and/or manufacturer's technical data sheet/instructions. Copies of relevant technical data and/or documents shall be available at the jobsite.

Before and during coating application, the Substrate's surfaces shall be dry, clean and free from loose debris, dust, dirt, grease, oil, and all prior coating materials, such as paint, stains and sealers. The foam should be allowed to cool to ambient room temperature and be able to be top coated according to SPF manufacturer requirements prior to the application of ThB *Spray Seal*TM, minimum 1 hour. The Substrate(s) shall not have, nor have been exposed to, treatments, chemicals, coatings, etc. prior to the application of ThB *Spray Seal*TM. Visual observation of the intumescent coating is naturally and distinctively white or gray in color unless tinted. For verification of the wet applied thickness, a standard painter's thickness gauge shall be used during the application. The finished dry mil thickness will be 0.55-0.70 times the wet mil thickness.

Substrate(s) shall be in the final position in the building, directly exposed to the interior, protected from the weather, in conditioned and unconditioned locations. Furthermore, ThB Spray SealTM shall be applied to areas within the weatherproofing membrane or surfaces not exposed to weather.

Surface and ambient temperatures before and during application shall be 40°F (4.4°C) minimum. Surface temperatures shall not exceed 100°F (37.7°C) during application. The coating shall be applied at an application rate set forth by spraying, roller or brush. Dry time is typically 60-90 minutes and cure time is 24 hours minimum, depending on the ambient temperature and relative humidity conditions. If more than one coat is required, allow No-Burn[®] ThB *Spray Seal*TM to dry completely between coats.

It's always best to follow SPF Manufacturer guidelines first and foremost when it comes to installing ThB *Spray Seal*TM, following the spray installation instructions closely. For high heat, humidity or extreme cold, ThB *Spray Seal*TM guidelines are as follows.

- A. ThB Spray SealTM can be installed to newly installed SPF based upon the top coat times of the SPF manufacturer. Please refer to the TDS of the SPF that Plus ThB will be applied to. Follow the installation instructions of the SPF manufacturer closely.
- B. Ideal installation temperatures are 65 degrees Fahrenheit or above, and less than 65% relative humidity.
- C. Ambient air and substrate temperature MUST be above 40 degrees Fahrenheit to apply ThB *Spray Seal*TM and cannot drop below 40 degrees Fahrenheit until after ThB *Spray Seal*TM has dried to the touch.
- D. For at least 72 hours after installation of ThB Spray SealTM, consistent temperatures must be maintained within the installation parameters (at least 40 degrees Fahrenheit, preferably 65 degrees Fahrenheit or above) and no more than a 65% relative humidity with readings taken daily. Any conditions outside of these guidelines must be approved by No-Burn[®], Inc. technical service.
- E. The space where ThB Spray SealTM is being installed must be well ventilated, either by natural openings or with the use of mechanical ventilation equipment, both during installation and for up to 72 hours once installation is complete, to allow for the curing process to complete. Humidity of the ambient air and amount of airflow through the space will affect cure times (i.e. more humid with less air movement will take more time to cure).
- F. Once cured, ThB Spray SealTM installed in continuous high humidity environments will require a top coat such as Behr Premium Plus or Sherwin Williams A-100 exterior paint (i.e.: 70% humidity and higher.). Parking structures, both above and below grade, will require this protection. If the installer has any questions regarding the humidity levels of the environment once ThB Spray SealTM is installed, it is recommended that they discuss with a No-Burn[®], Inc. service technician.

Empty pails may be recycled in accordance with your local recycling and waste management requirements. If construction includes deconstruction and reclamation of plastic construction products, it may be necessary to sort plastics according to designations.
